

Modernize your process

Drive productivity. Improve profitability. Enhance compliance.

Pace InSite: Phase 1

Access your data on any device, anytime, anywhere

Pace InSite™ is a cloud-based data management software that allows you to access reports and export packing line data. It conveniently analyzes trends to help you make informed decisions about day-to-day operations.

Drive Productivity

Help your team save time and work smarter with easy to use tools to capture, validate and track data.

Improve Profitability

Save money and increase margins with real time analytics to support effective decision making.

Enhance Compliance

Enhance Food Safety to ensure all compliance standards are being met.

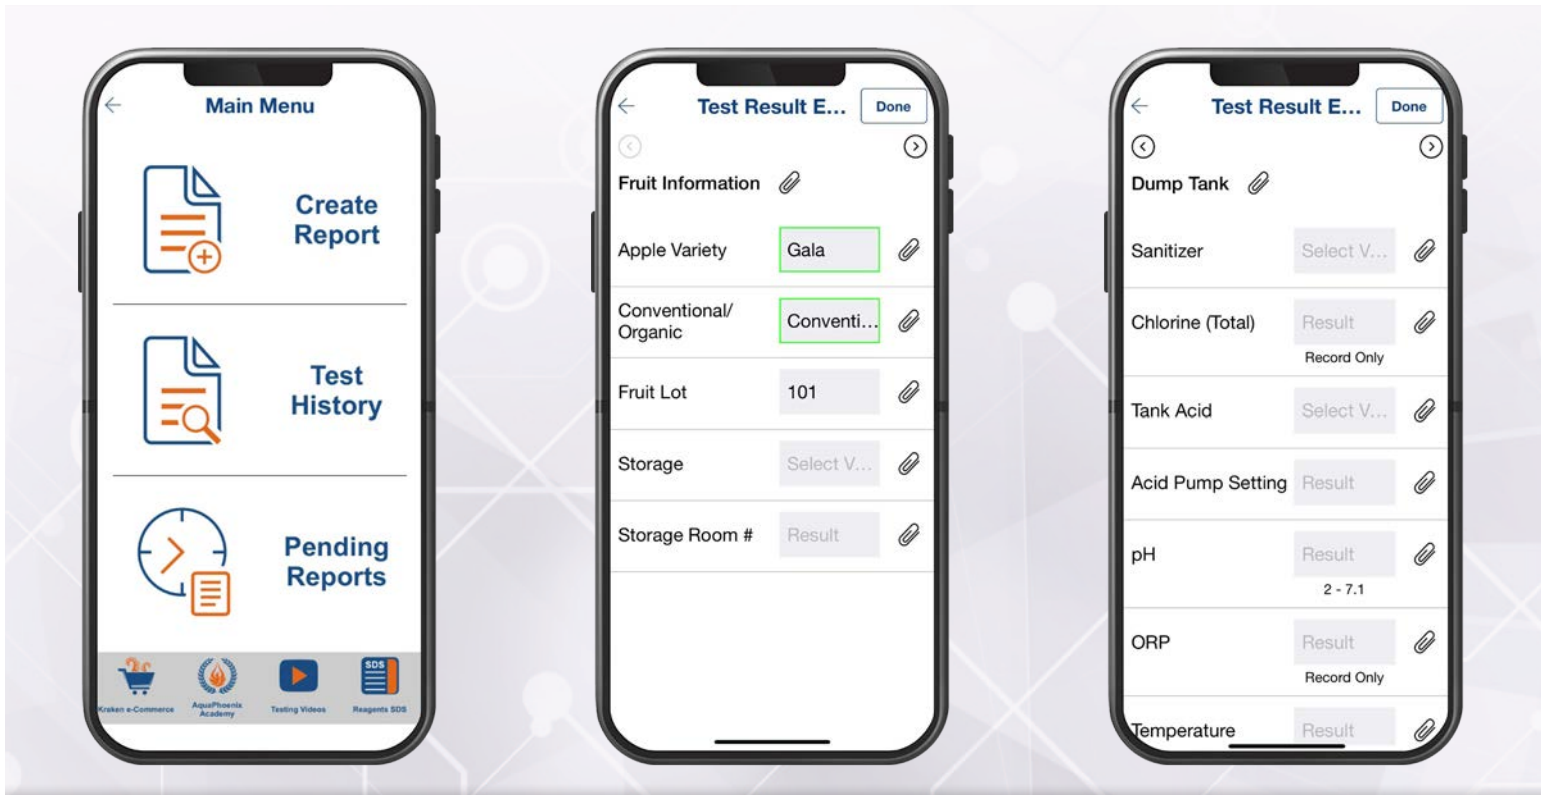

Benefits and Features

- 24/7 access through any device
- Streamline your data
- Equipment settings
- Charts and trends
- Service reports
- Maintenance summaries
- Product usage history

To learn more, contact your local Pace service representative or visit us at www.paceint.com/pace-insite

Pace InSite: Phase 2

Enter your own packinghouse data to track what you want, when you want

Pace InSite's™ mobile app is called Aliquot. It is designed to help operators upload data and reports electronically to your Pace InSite™ account and access them immediately, all in one place. With this new capability, you can enter the data that is relevant to your facilities during the timeframe you want.

View Historical Data

Upload reports more regularly and experience the benefits of a larger, more representative set of data depicting the day-to-day operations of your facility.

Maximize Efficiencies

Utilize Pace InSite analytic tools with your data to increase efficiency on your packing line. Identify and react to trends in your packing operation.

Enhance Compliance

Enhance Food Safety to ensure all compliance standards are being met. Quickly and easily check the compliance for critical Pace (sanitation/food safety) products such as Accu-Tab Chlorine and Shield-Brite PAA.

Benefits and Features

All Phase 1 benefits and features included plus:

- User-entered reports
- Centralized, in-the-field documentation
- Dive deeper into your packing line measurements
- Subscription-based access
